

SUMMARY

Software engineer building production-style backends, ML pipelines and LLM-powered apps in Python, TypeScript and Java, with performance claims backed by measurement.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, C++

AI/ML: PyTorch, Transformers, scikit-learn, pandas, LLM APIs (Claude, Gemini, OpenAI)

Backend & Data: FastAPI, Flask, Node.js, Spring Boot, PostgreSQL, Supabase, Firebase

Frontend & Tools: React, React Native, Docker, AWS, Google Cloud Run, GitHub Actions, pytest

EXPERIENCE

Software Engineer - Utilyze, Inc. (Sep 2026 – Present)

- Built reproducible PyTorch training infrastructure for a transformer trained on biological data, with tamper-evident checkpoints and full run provenance (seed, data version, config, compute).
- Designed leakage-safe data pipelines that validate every dataset against a pre-registered spec and split data by biological replicate.
- Developed a model-comparison pipeline that shows interpretability teams exactly where models disagree.

Software Engineer (Volunteer) - AuntMary's Storybook (Feb 2026 – Jul 2026)

- Rebuilt 10+ legacy PHP pages from Figma designs for a nonprofit connecting incarcerated parents with their kids.
- Owned the recording-session and caregiver features, shipped through PRs and code reviews in Docker.

Software Engineer Intern - Devin (Nov 2025 – Feb 2026)

- Built an LLM-powered companion chatbot in Python and Flask that stayed reliable when upstream API calls failed.
- Ran trials across AI personas and tuned prompts until responses were faster and adapted to each user.

Physics Undergraduate Instructional Assistant - Texas State University (Aug 2023 – May 2026)

- Taught and mentored 40+ students per semester in physics labs.

PROJECTS

VoltStream – Real-Time Battery Telemetry Platform

Python, FastAPI, PostgreSQL, React, scikit-learn, Docker

- Streamed telemetry from 100 batteries through FastAPI and PostgreSQL to a live React dashboard.
- Fixed a race condition found in load testing, raising throughput 2–2.5× and cutting median latency up to 69%.
- Benchmarked 3 ML models against a physics baseline on 1.1M rows; shipped the baseline after it won.
- Wrote 355 tests against a real PostgreSQL database; deliberate failure testing exposed and fixed two deadlocks.

LLM Prompt Injection Tester – AI Security Evaluation Tool (team of 5)

TypeScript, React, OpenAI, Gemini and xAI APIs

- Ran three published prompt-injection attacks against GPT, Gemini and Grok, auto-scoring whether each was fooled.
- Built a shared adapter interface so every attack runs identically across providers, with charts and CSV export.

DIDI (दिदी) – AI Wellness Companion for Nepali Women

React Native, TypeScript, Express, Supabase, Claude API, Gemini API

- Built a wellness app with mood check-ins, anonymous story sharing and a family-support view.
- Generated personalized suggestions with Claude and Gemini via an Express API on Vercel and Supabase.

EDUCATION

Texas State University-San Marcos, TX

Bachelor of Science in Computer Science with Honors

Graduation: May 2026

Cumulative GPA: 3.74

LEADERSHIP & INVOLVEMENTS

Adobe Student Ambassador | SWE Member | IEEE Member | Rewriting the Code Member | Dean's List (8 semesters)
